User Manual

Brand: QL

Product Name: Self-powered Portable Scale

ASIN: B0GTV4D428

SKU: QL-XLC-0001

Manufacturer: QL Tech Co., Ltd.

Basic Characteristics

- Equipped with a high - precision sensor system
- High - definition LCD display screen
- Weighing range: 200g - 50kg
- Division value: d = 50g
- Automatic locking: The weight reading will be automatically locked after 2 seconds of stability.
- Unit conversion: kg / lb
- Power on/off: It will turn on automatically after pulling the silicone strap multiple times, and it can be used for about 1.5 minutes when fully charged (pull it approximately 8 - 10 times).

Usage Precautions

- Locking Prompt: The locked value will flash twice.
- Short - press the button: To unlock and tare.
- Tare/Zero - setting: Taring is carried out when the weight is 2% of the full - scale range. That is, when the weight is less than 1200g, it will be set to zero; when the weight is greater than 1200g, taring will be performed.
- Low Voltage/Overload Prompt
- Error Prompt

Unit Conversion

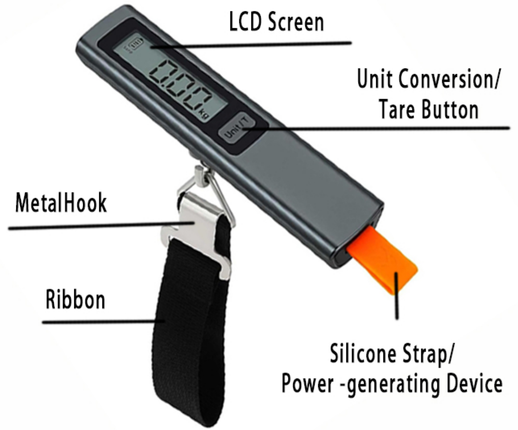

- Unit conversion: kg / lb
- Set the unit before weighing: When the display shows "0.00", long - press the "Unit/T" button to switch units.
- When a value is displayed on the screen, long - press the "Unit/T" button to convert the weight.

Error Prompt

Overload display symbol: When the weight value exceeds 51KG, "Err" will be displayed on the screen.

How to Weigh

- When weighing, keep the object vertical. Do not shake it.
- This product is only suitable for household weighing and shall not be used for commercial or other purposes.
- Do not weigh objects exceeding the maximum weighing value (51KG) to avoid damaging the product's sensor.
- Do not wipe this product with chemical solvents. You can use a damp cloth moistened with water to wipe it.
- Do not let water get into the scale.
- To ensure the service life of this product, do not place this product in a hot and humid environment.
- Abnormal use, impact, or dropping can easily damage this product and pose a danger.

Battery & Power Information

Battery & Power Information

This product does NOT include disposable batteries (such as AA, AAA, or button cells).

This product does NOT contain a built - in rechargeable battery.

Power Source & Principle

This luggage scale operates on a self - powered/energy - storage principle and requires no external batteries:

Self - Generating System

Pulling the silicone strap activates an electromagnetic induction mechanism that generates electrical energy to power the scale.

Built - in Capacitor Energy Storage

The generated electricity is stored in an internal capacitor, which supplies power during weighing.

Power On

Before each use, quickly pull the silicone strap 8 – 10 times to charge the capacitor.

Operating Time

Before each use, quickly pull the silicone strap 8 – 10 times to charge the capacitor.

Low - Power Warning

When the battery icon on the LCD screen flashes, it indicates low power.

Pull the silicone strap again to recharge.

Low - Power Warning

The scale will automatically shut down when the stored energy is depleted.
